

The background of the image is a close-up, blue-tinted photograph of a laptop keyboard. Overlaid on the keyboard is a semi-transparent globe showing the continents of North and South America. A network of glowing blue lines and dots connects various points on the globe, symbolizing global communication or data flow. The text is centered over this graphic.

THE IMPORTANCE OF TECHNOLOGY AND TELECOMMUNICATION IN OUR LIVES

In the last years there has been an ever growing increase in the use of telecommunication among the people, especially among the teen agers. Some of the most important devices that make part of our lives are smartphones, computers, tablets...but they would be useless without the presence of INTERNET! Almost every technological device is able to connect to internet with the wi-fi service and this has made our communication easier...

The use of technology and telecommunication has spread into almost every area of our lives at any age. Telecommunication gives us the chance to talk to people that are distant from us and to know new friends from all over the world!

POSITIVE AND NEGATIVE ASPECTS OF TELECOMMUNICATIONS

Telecommunications - above all information technology, computers and the Internet - are continually changing the way we live. Their influence has spread into almost every area of our lives: work, education, communication, entertainment, shopping, etc. But what are the positive and negative aspects of telecommunication?

Positive aspects

- 😊 Thanks to telecommunication, we can do many things more quickly and easily;
- 😊 We can communicate with all the world through computers connected to Internet;
- 😊 We can get the latest news in real time;
- 😊 We can send and receive letters faster with the electronic mail;
- 😊 Advances in telecommunications have accelerated our discoveries and inventions;
- 😊 Culture and information are spreading more rapidly;
- 😊 We can buy and pay everything at home everyday;
- 😊 Above all, telecommunications have improved and simplified our lives.

Negative aspects

- ☹️ Telecommunications make us lazy;
- ☹️ Telecommunications can damage our personal relationships;
- ☹️ We prefer playing with videogames or watching television rather than doing sport or going out with our friends;
- ☹️ We are becoming increasingly addict of television, Internet, computer and mobile phone;
- ☹️ Some equipment, like mobile phones, can damage our health because of the radiations;
- ☹️ Sometimes the equipment can create problems;
- ☹️ Sometimes the information circulating on Internet are not true and of a bad quality;
- ☹️ Internet could not be educational for children because of some bad websites and malicious people.

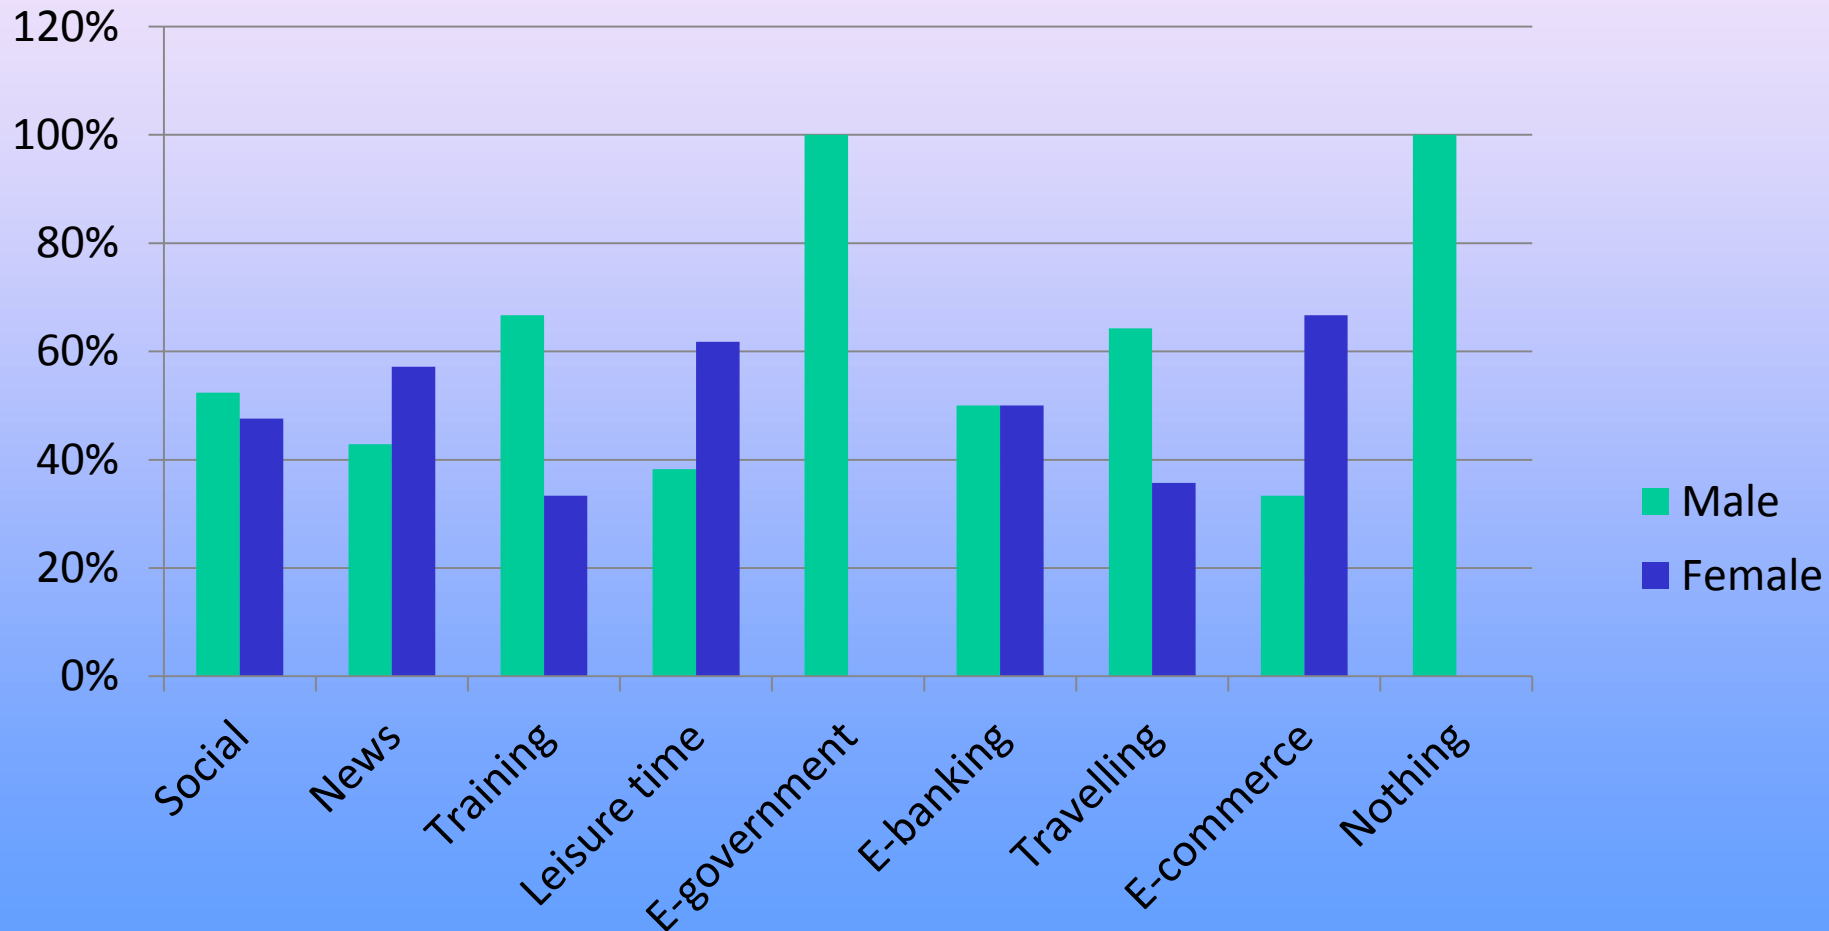

Interview

We have interviewed different kind of people according to their genre, job, age. The survey was about the accessibility and the use of the new technology. The following graphics show the result.

	MALE	FEMALE	TOT
from 10 to 20 years	13	16	29
from 20 to 35	10	11	21
from 35 to 50	20	29	49
>50	17	11	28
TOT	60	67	127

	MALE	FEMALE	TOT
artisan	5	1	6
other	4	2	6
unemployed	5	12	17
emplooyed	11	10	21
worker	11	11	22
professional	10	5	15
student	14	26	40
TOT	60	67	127

CITIZENS AND NEW TECHNOLOGIES

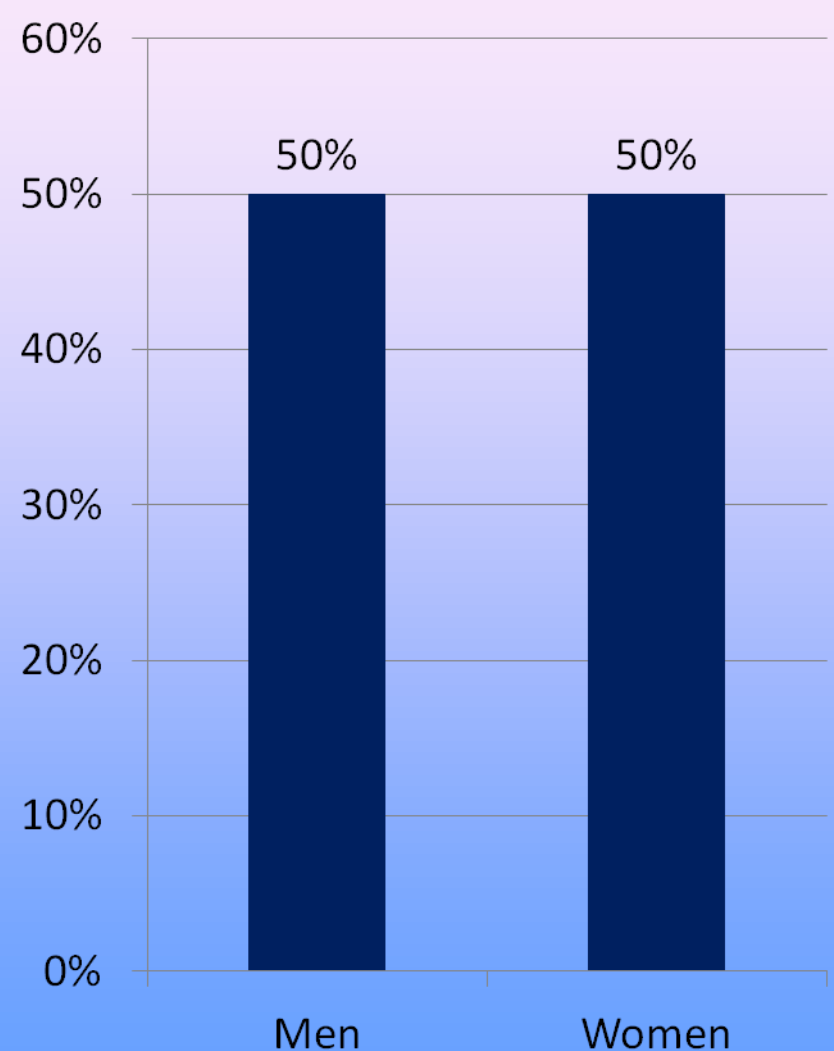

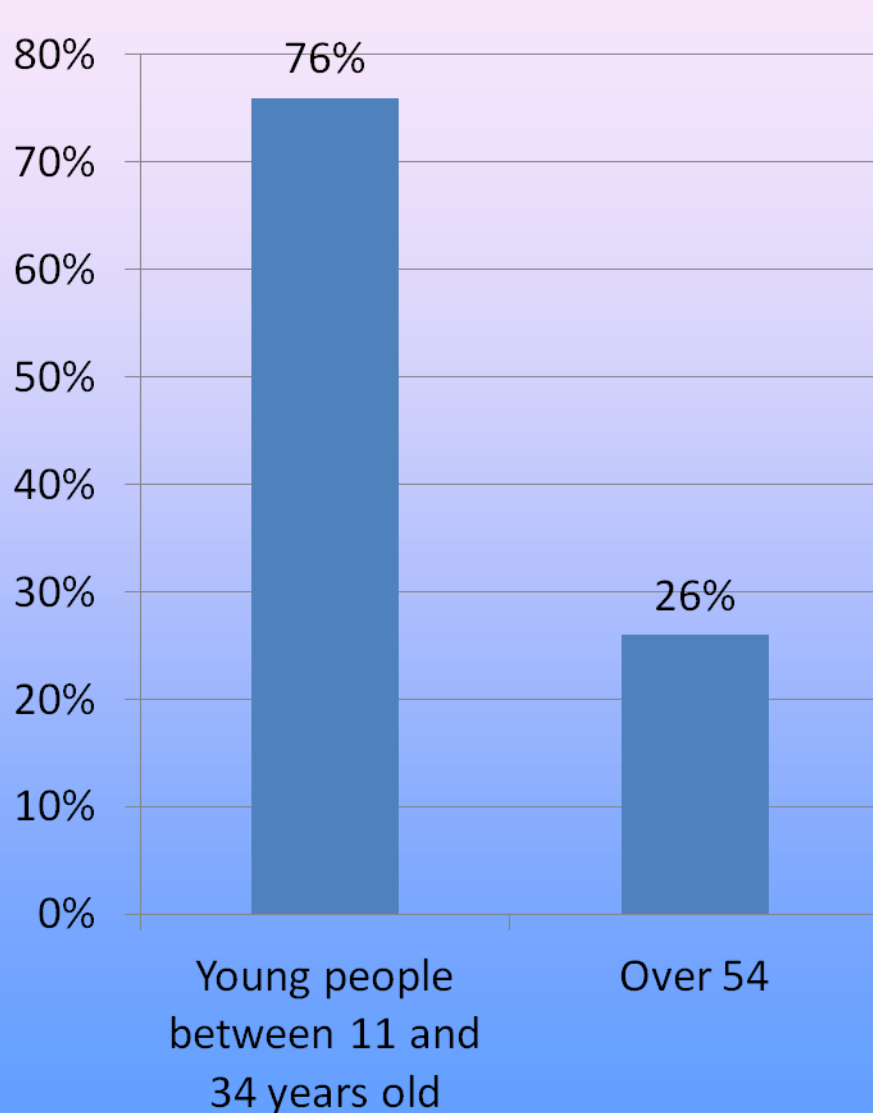

Families with at least a minor are the most technological:

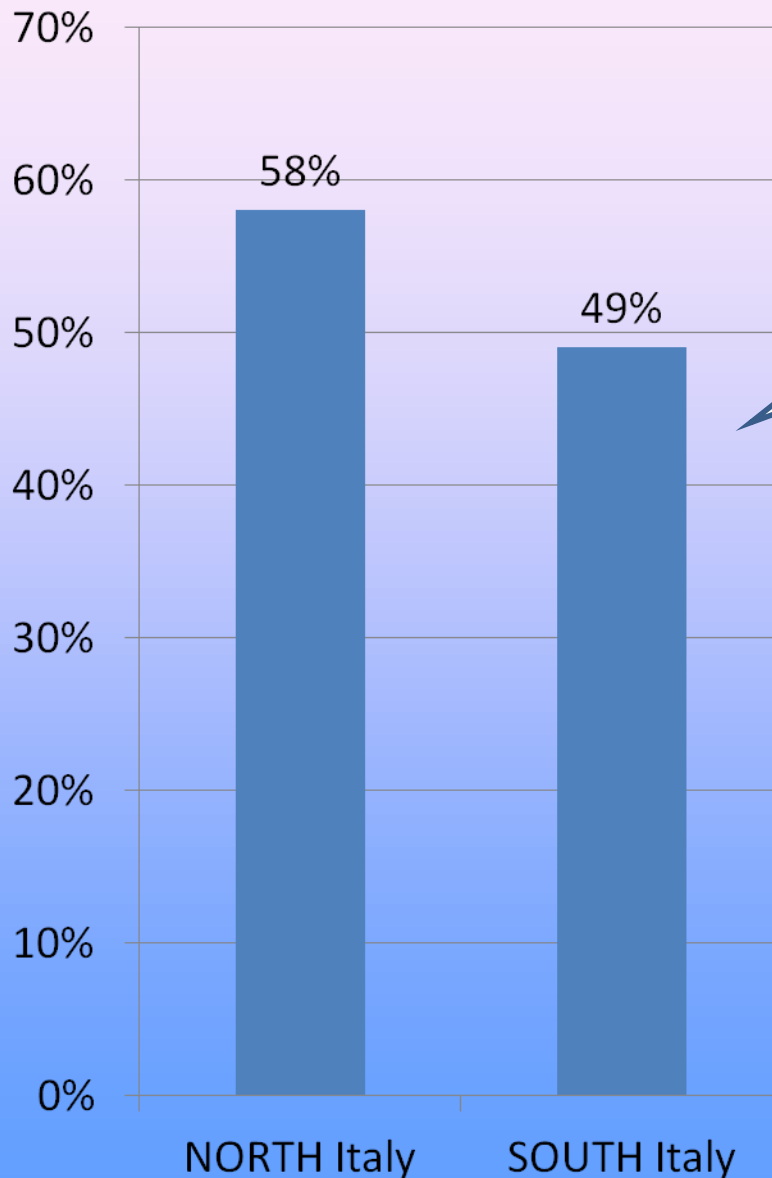

Elderly families:

Who uses Internet more frequency?

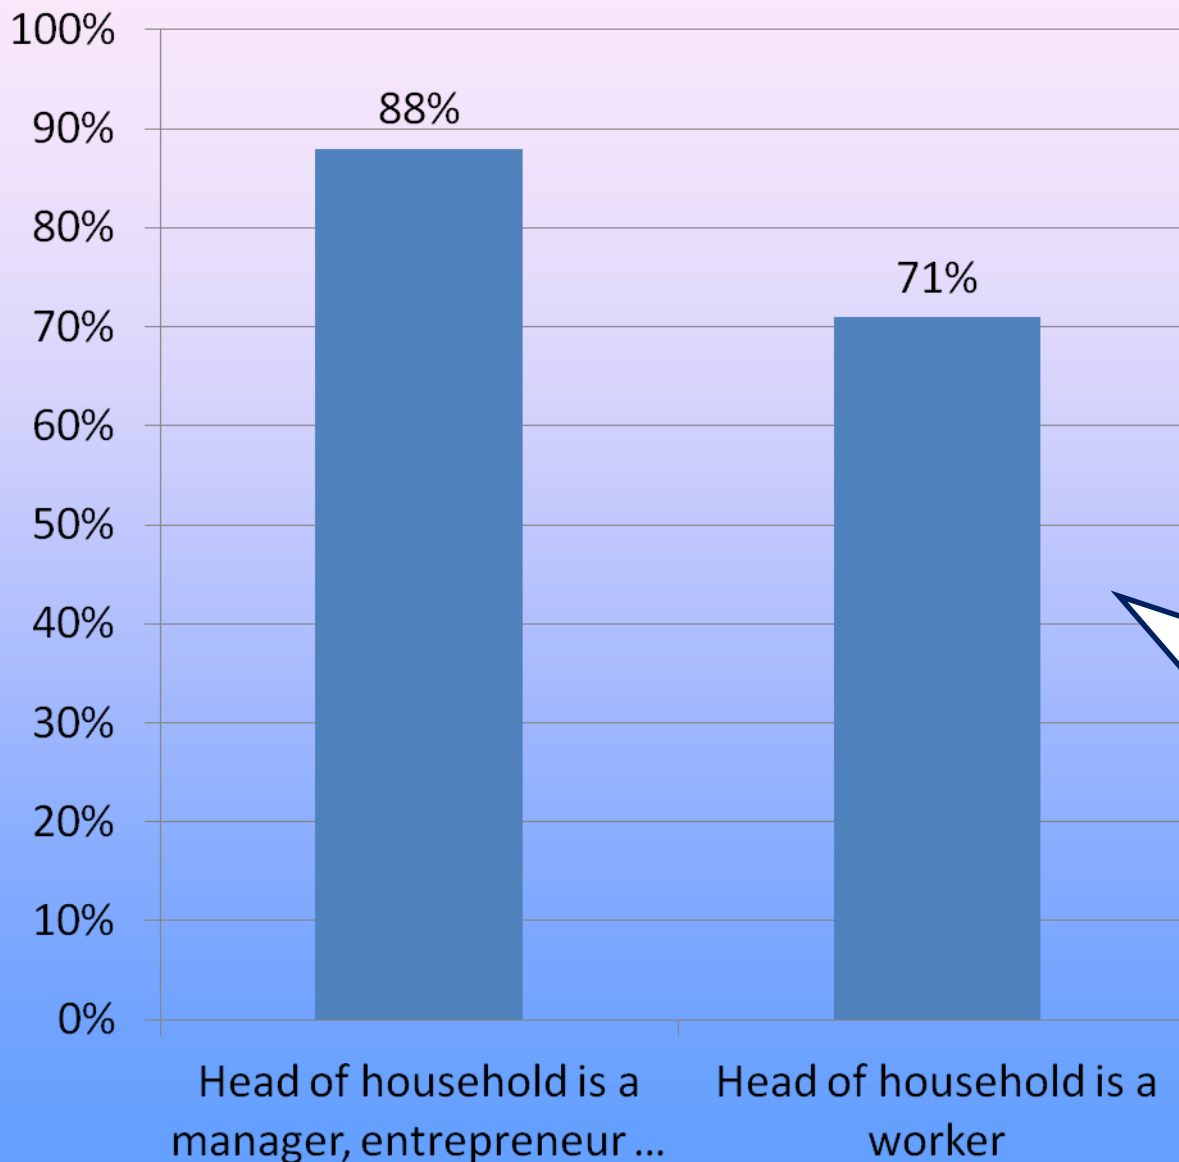

Differences between North and South Italy.

The families of Northern Italy are the most technologically advanced

Social differences

Most technological families are those with at least one the parents working as an executive, an entrepreneur, a freelancer or employee.

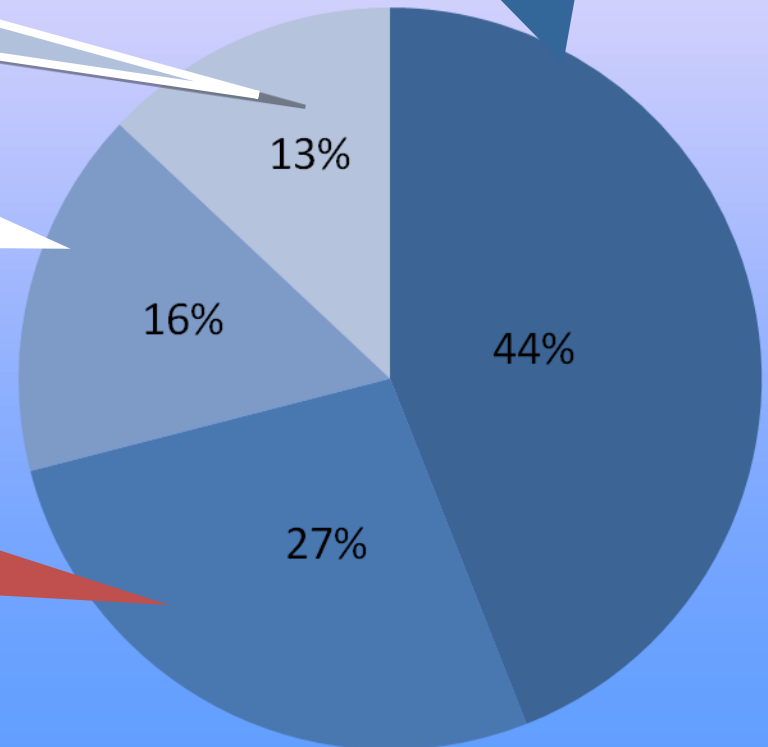

Why do some families do not have Internet?

Because they can't use it

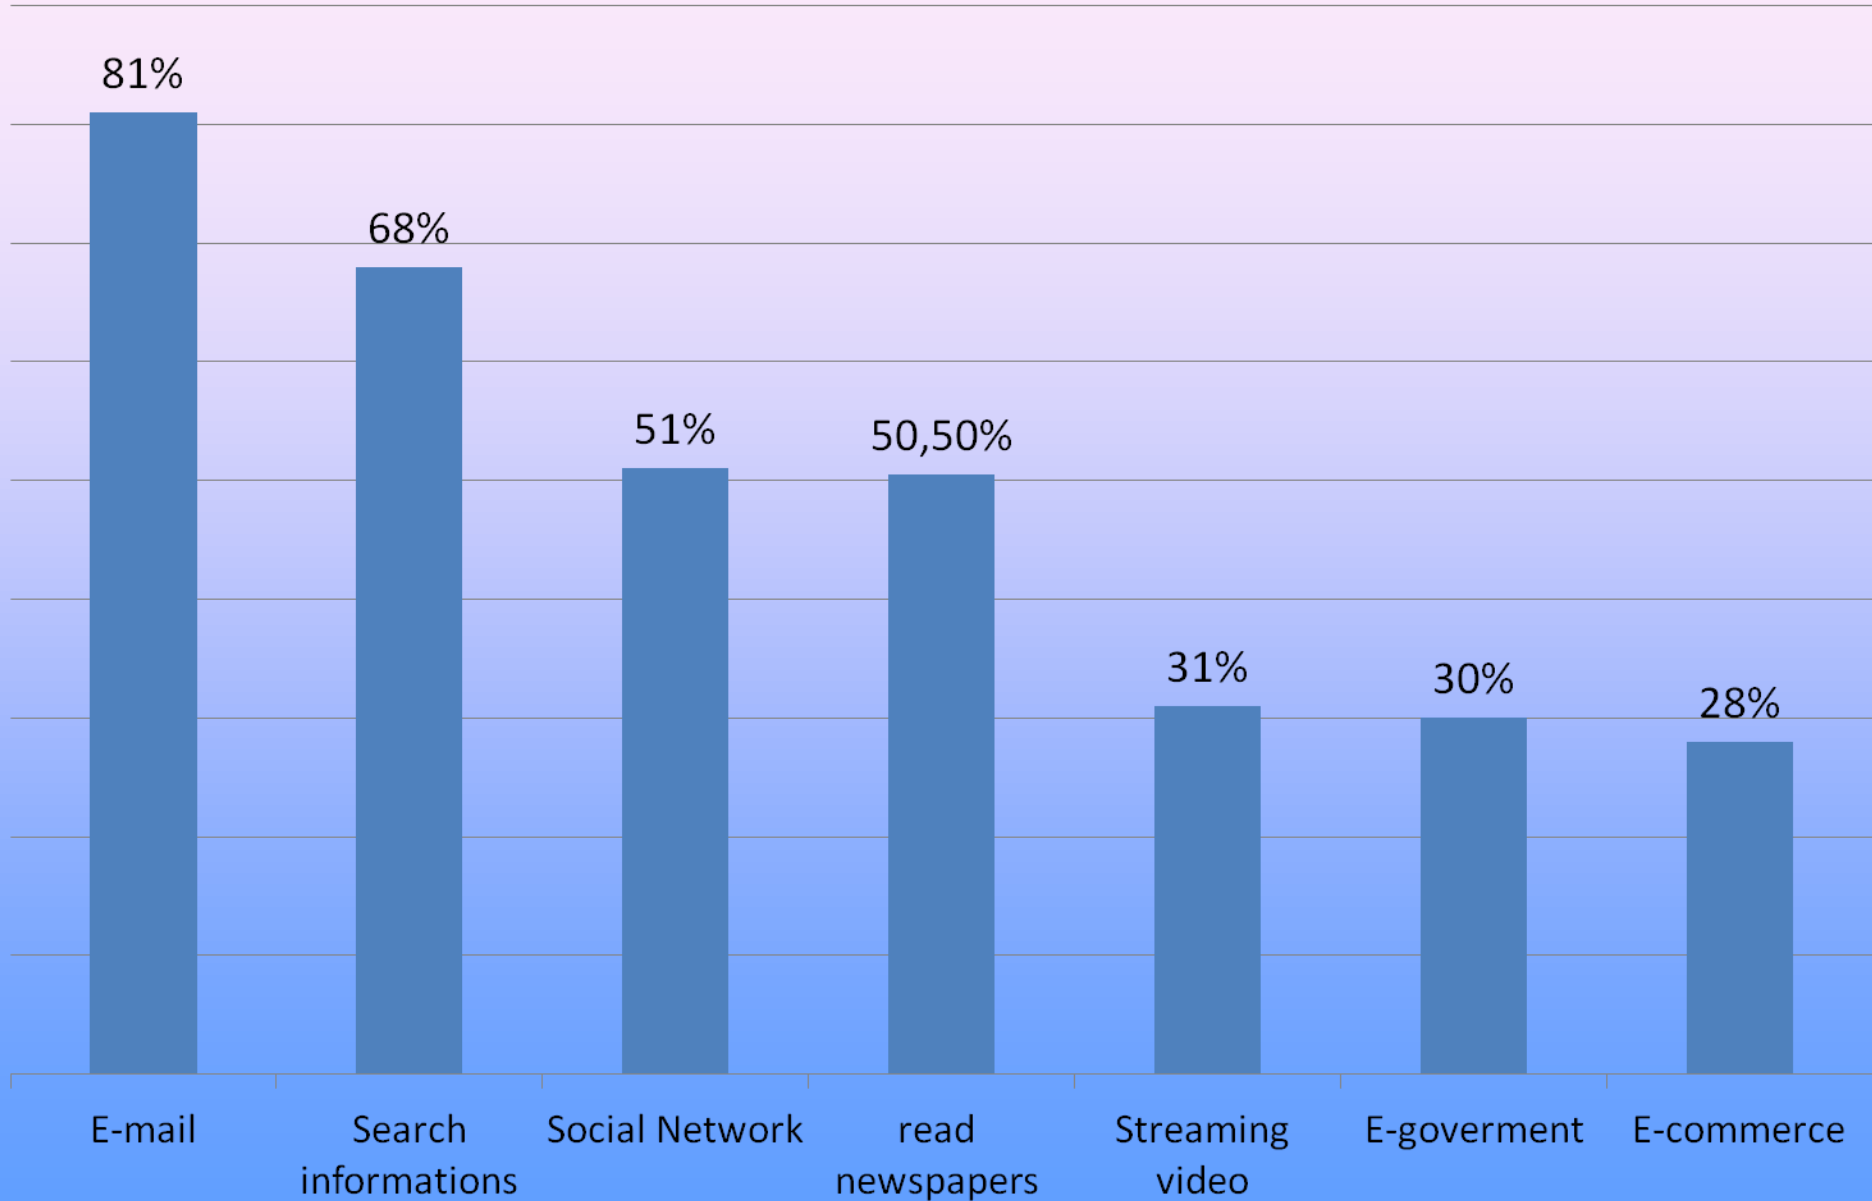

Because it accesses from another place.

For economic reasons

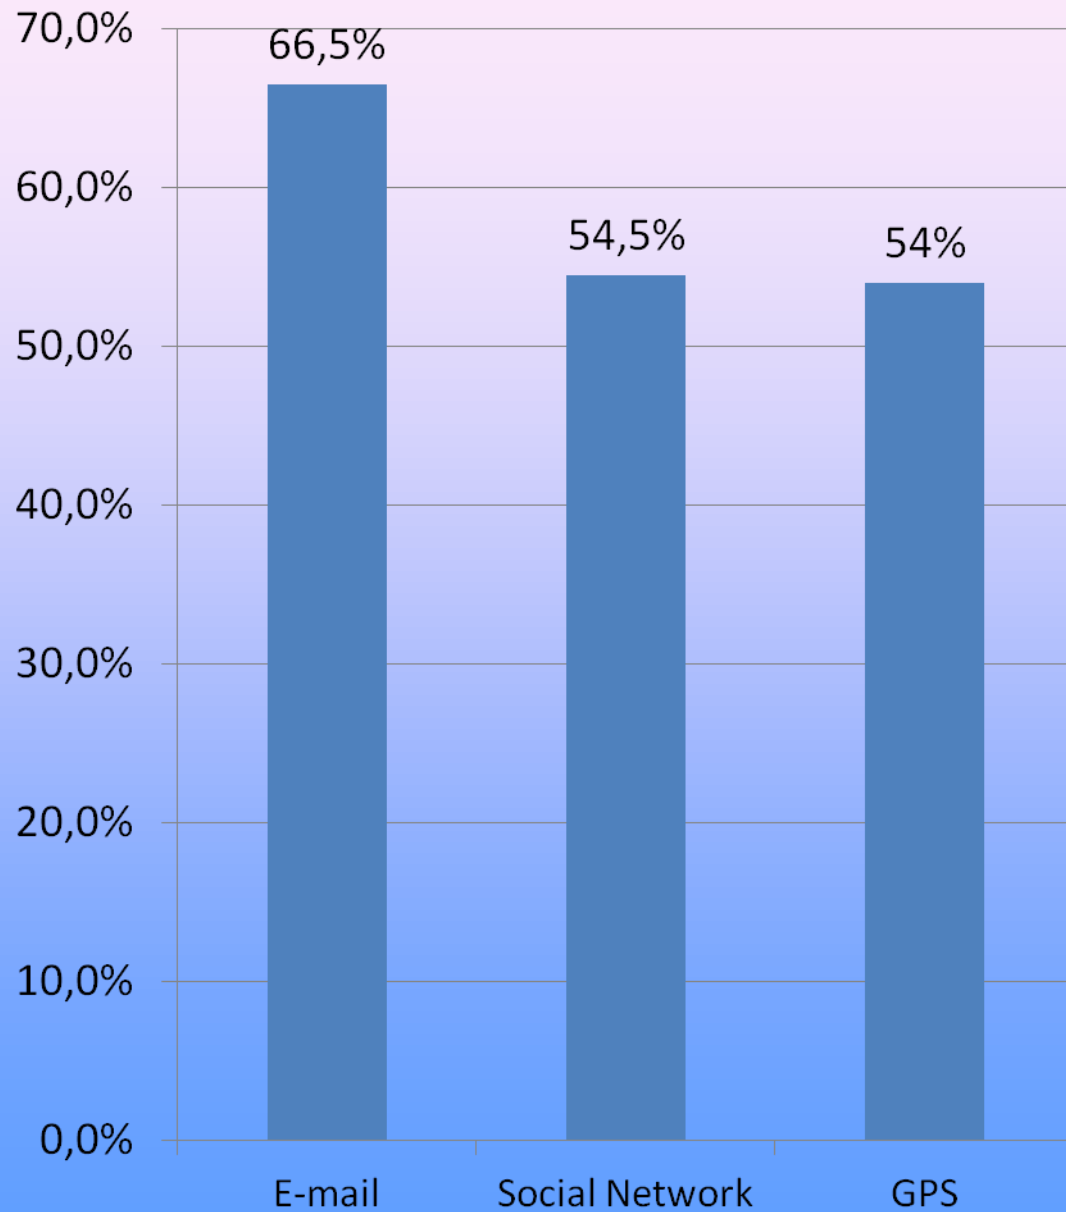

They think that the Internet is useless and uninteresting,

What is the main use of Internet?

Use of Internet from smartphones

From the survey we can say that...

- 1- The ads appearing on sites annoy most workers and employees because they are interrupted while working, while for the majority of the unemployed these ads do not cause any problems.
- 2- According to students, the technology has affected relationships because through its use there is a lack of physical communication.
- 3-For the students, the use of the Internet creates a kind of addiction respect to others means of communication.

4-To arrange a dinner, we noticed that men, compared to women, use more text messages, while women use more likely the phone.

We can also say that people who use e-mail are only those ones aged 50 years because young people feel more comfortable using facebook.

5- As we thought for adults with more than 50 years, the use of the Internet is more difficult than for students, who constantly use it.

**Thank you for your
attention! 😊**
