What are they?

What's the opinion of media?

THE NEW TECHONOLGIES

What are the negative aspects?

What are the positive aspects?

New technologies

New technologies are tools that make life easier, keep us in touch with people far away, offer various services like shopping on line, updates news, help in school projects, show recreation sites, and are a source of unlimited knowledge. But there's a possibility to become addict!

New technologies have had and
still have **benefits** on our lives

They have improved the working conditions

Time ago

Now

They have improved our way to communicate

Time ago

Now

They have improved our daily activity or housework in general

Time ago

Now

They have changed our free time activity

Time ago

Now

They have speeded up our movements

Time ago

Now

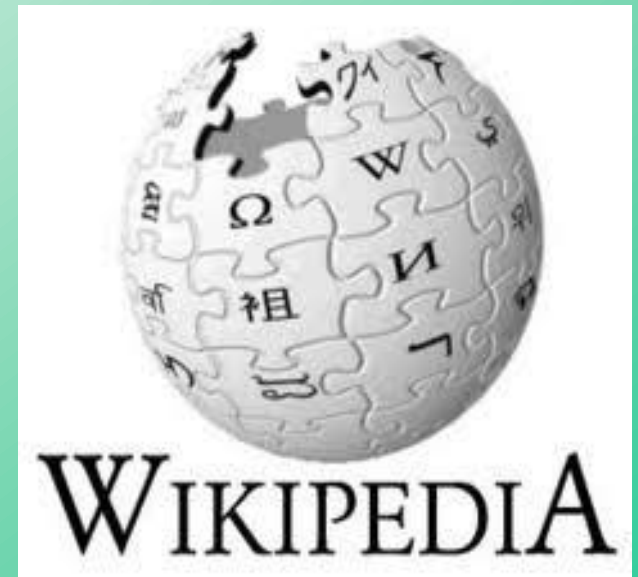

Thanks to the new technologies, we find out the information we need more quickly

Time ago

Now

The circulation of the news is faster, for example, many newspapers have a website with news currently updated

In conclusion we can say that
new technologies have
improved our lives helping us in
our daily life both at school or at
home. In general we have more
free time

New technologies have also
negative aspects

The mobile phones are very important because we can reach everyone at any moment, but our parents get easily angry because we spend too much time talking or chatting on the mobile

New technologies take a lot of time that could be spent in a healthier way

Now we have become technologies addict,
and at the same time our ability to interact
has worsened

Another negative aspect is the
electrosmog, which may causes brain
cancer

The problem also concern young children because they can be approached by maniacs or they can come across pornographic sites easily available on the Web

The human relationship have almost disappeared since the introduction and the massive use of new technologies. Nowadays everybody communicates through sms or chat on social network and people have problems to talk or express their opinion directly

It is a widespread custom to buy items of all kinds on Internet but you do not always get what you order

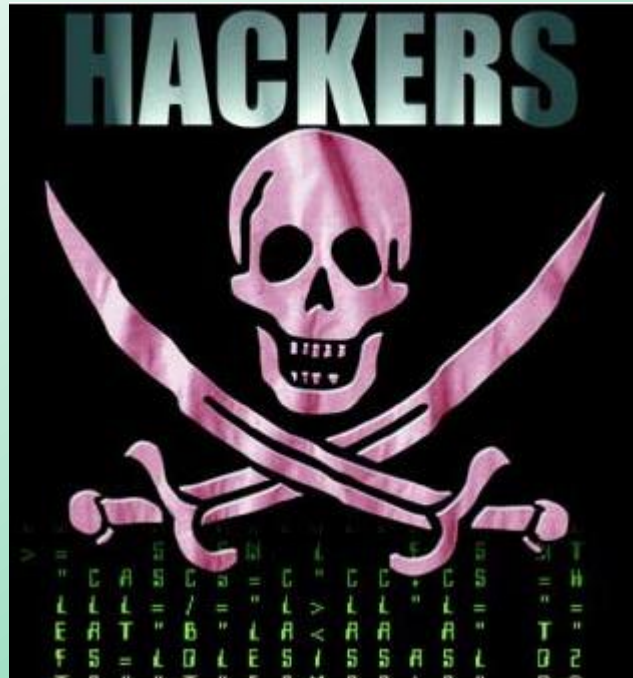

Researches on internet are sometimes
useless because the source of information
can be unreliable

The technology has often create unemployment, because it has replaced jobs usually done by people

No personal information is always safe on the web because the hackers could steal your identity online

What's the
opinion of media
about that?

INTERNET IN ITALY

Italy is the European country with more public services online (100%), ahead of Germany and France.

Nevertheless, it is one of the countries with more families without internet, in fact, only 62% of households have a connection to the network.

In this context, Italy ranks behind many countries, including France, Germany, Sweden and United Kingdom.

39% of the population aged 16 to 74 years has never connected to the web, in England the number is limited to 10%.

(From Il Corriere della sera)

TEENAGERS ON THE NET

For teenagers the network (Social Network) is more reliable than TV. The pervasive influence of the digital world on teens: a continuous series of text messages, chat and rings, as if to say: "I am here, I exist."

90% of them have mobile phones, 80% surf network. The teens, with their opinions, influence the success or failure of a "brand" through pass the word on the Internet.

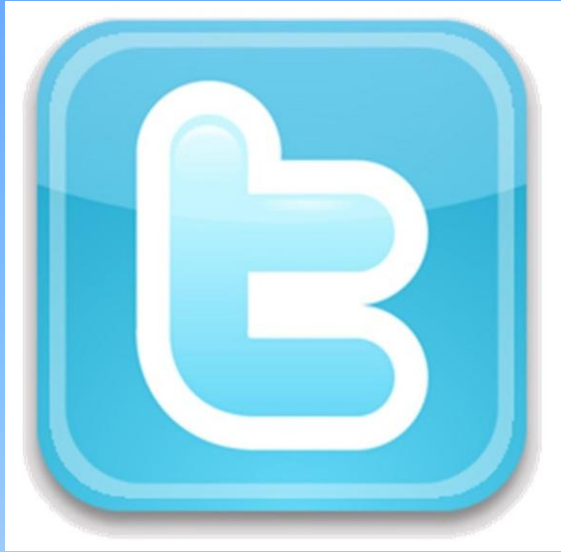

(From *La Repubblica*)

MOBILE PHONES

Today, mobile devices are more numerous of human beings. The real communities are replaced by virtual communities, or imaginary, and in general we live in a not authentic way.

(From *Resto del carlino*)

THE SOCIAL NETWORK

Social networks are like drugs for young people! Like everything else they have their positives and negatives:

Positives: allow many people who live in isolated places to know and see everything that happens in the furthest and most populated areas, it also allows people to talk to the other side of the world!

Negatives: you never know who might be behind the screen! There are many news stories that speak of the "maniacs of the web."

The most popular social networks are Facebook, Msn, Skype, Twitter and Meetic but you must use them cautiously, without giving too much information about you, that could be used for commercials
